

Layerstack Dispersion Calculation

Contents

Statement of the problem for elastic wave propagation in solids

Classification of the acoustic waves

Bulk acoustic waves (BAW)

Surface acoustic waves (SAW)

Elastic, piezoelectric and dielectric constants for crystal materials

Matrix symmetry properties of piezoelectric materials

Aluminium Nitride AlN and its use in BAW devices

Basic assumptions and system of the differential equations for wave propagation

Solution of the wave problem in the infinite media

- Christoffel tensor and matrices
- Generalized and standard eigenvalue problems
- Christoffel secular equation and its solution
- Eigen-values and eigen-vectors and their properties
- Bulk acoustic wave solution

Wave Problem Solution for the half space

- Boundary conditions on the surface
- Partial waves and wave problem solution

Wave Problem Solution for the finite thickness layer

- Boundary Conditions at the top and bottom interfaces
- Layer transfer matrix and Fahmy-Adler solution

Wave Problem Solution for the multilayer stack

- Calculation of the multilayer overall transfer matrix
- Interfacial and terminal boundary conditions in the multilayer stack
- Electrical and mechanical boundary conditions at the external interfaces

Computational Algorithm for layerstack dispersion diagram

Understanding of the dispersion diagram

Tutorial Examples and analysis of the dispersion diagrams

Example of the FBAR dispersion diagram

Conclusions
