

Layer Stack Wave Propagation and Dispersion Diagram

Contents

1. Introduction
2. Elastic wave propagation in solids
 - 2.1 Acoustic wave classification
 - 2.2 Bulk Acoustic Waves (BAW) and Surface Acoustic Waves (SAW)
 - 2.3 Elastic, piezoelectric and dielectric constants of crystal materials
 - 2.4 Matrix symmetry of piezoelectric materials
 - 2.5 Aluminium Nitride AlN and its application in BAW devices
3. Wave problem and solution
 - 3.1 Wave propagation in the infinite media
 - 3.1.1 System of the ordinary differential equations (ODE) for wave propagation
 - 3.1.2 Christoffel tensor and matrices
 - 3.1.3 Standard and generalized eigenvalue problems
 - 3.1.4 Eigen-values and eigen-vectors and their properties
 - 3.1.5 Christoffel secular equation and its solution
 - 3.1.6 Dyadic Green's Function
 - 3.1.7 Bulk acoustic wave solution
 - 3.2 Wave propagation in the half-space
 - 3.2.1 Surface boundary conditions
 - 3.2.2 Partial waves and general wave problem solution
 - 3.3 Waves in the finite-thickness layer
 - 3.3.1 Interfacial boundary conditions
 - 3.3.2 Layer transfer matrix
 - 3.3.3 Fahmy-Adler solution of the wave propagation problem
4. Multilayer stack analysis
 - 4.1 Calculation of the overall multilayer transfer matrix
 - 4.2 Electromechanical interfacial and terminal boundary conditions
 - 4.3 Algorithm for dispersion diagram calculation
 - 4.4. Analysis of the algorithm numerical instabilities
 - 4.5 Review of the state-of-the-art techniques with improved numerical stability
5. Analysis of the layer stack dispersion diagram
 - 5.1 Understanding of the dispersion diagram
 - 5.2 Dispersion diagram tutorial examples
 - 5.3 Analysis of the FBAR dispersion diagram

6. Conclusions
